Summary

Optical Biofluidics Imaging Group is dedicated to advancing the understanding of how cells interact and respond to fluidic forces by developing and using low phototoxic optical tools. Our work helps us to gain insight into tissue injury, pathogen invasion, and cancer metastasis under fluid mechanical forces.

I am an optical biophysicist who draws inspiration from the physical world of light and fluids to develop optical tools for cell biology. In my PhD (2006-2010), I engineered fluid singularities in laser fields as an optical force spectroscopy tools (Nature Protocol- 2007) to study membrane permeability in mammalian cells for the purposes of genetic transfection. In parallel, I invented an ultrasensitive optical fiber-capillary scheme to test optical nonlinearity of nanofluids (Opt Express -2009, Physical Review A,-2009) and established foundation of artificial Kerr nanomedium - first observed in 1981 by Arthur Askin (Nobel Prize Physics-2018). In 2010-2012, I crossed discipline from optics to biomedicine at Harvard Medical School. I led the development of adaptive microendoscopy optics techniques (Massachusetts General Hospital- Advanced Microscopy Core), that is further applied to a broad range of disease mice models from aortic allografts (Am J Transplant-2012), taste sensation (Sci Report -2013) and colorectal tumor development (Nat Protocol -2012).

Since 2013, I led the establishment of biomedical optics at ANU. Shortly, after my invention of a fluidic-lens shaping kits for smartphone microscopy (2014 ANSTO Innovative Technology Award), I won successive competitive grants (2016-2023, \$2.87 million as lead PI and \$12.6 million as co-PI) which lead to the creation of an Adaptive Imaging and Lithography OptIcal platform (AILOI) comprising of 5 bespoke fully functional systems for in vivo and in vitro biology. AILOI is designed to map molecular pathways of how cells live under fluid pressure across size and time scales.

Through the comprehensive research and teaching program in biomedical optics at ANU, I have trained and graduated over 41 researchers (postdoctoral, PhDs, Masters, Honors Project, summer scholars) that has taken up senior research or industry positions - tenure track position at Beijing University of Posts and Telecommunications, postdoctoral position at Rockefeller University, University of Adelaide, University research fellowship (Birmingham) and EMBO fellowship. Positions in established biomedical industry including Therapeutic Goods Administration (TGA), Cochlear Australia , ResMed (Sydney), Beijing Genomics Institute. Research undergraduates from my laboratory have obtained highest distinction from Australian National University, Institution of Engineering and Technology and Harvard-MIT Program in Health Sciences and Technology. Tools from my laboratory have been the subject of 4 international patents (WO2015113105A1, WO2017205892A1, WO2018045409A1, AUSIP-2019904929). Aside from that, I been invited to give oral presentations at over 22 international and national conferences (plenary, keynote, public lectures) organised by Google, ANSTO, Royal Society-NSW, TedXCanberra, National Optical Societies (OSA, EOS, AOS) and Fraunhofer institute and Czech Academy of Sciences. My work received media coverage in TIME, ABC News, Sunrise (Ch7) ,SMH, The Australian, CBS News and Smithsonian.
